## Product Characteristics & Functions

### Display

#### Easy to read

Large LED temperature display for actual value and setpoint (display resolution 0.1 °C)

#### A perfect view

Ample, easy to read VFD Comfort display for simultaneous display of 3 values, warning functions, high temperature cut-off, pump stages (display resolution 0.01 °C)

#### Filling level

Filling volume display

#### Clear

Comfortable, splash-proof control panel

### Temperature Control

#### Precise

PID Temperature control with set control parameters, temperature stability  $\pm 0.02 \dots \pm 0.2$  °C

#### For higher demands

PID Temperature control with drift compensation and adjustable parameters, improved temperature stability for external applications, temperature stability  $\pm 0.01$  °C internal,  $<\pm 0.1$  °C external

#### For perfect results

'Intelligent Cascade Control', automatic & self-optimizing adjustment of PID control parameters, temperature stability  $\pm 0.005$  °C internal,  $<\pm 0.05$  °C external

#### Full control

'Temperature Control Features' for individual optimization, access to all important control parameters, additional settings for band limit, limits, co-speed factor, etc.

#### Direct control from external application

External Pt100 sensor connection for highly precise measurement and control directly in the external application

#### Highest measuring accuracy

'Absolute Temperature Calibration' for compensation of a temperature difference, 3-point calibration

### Refrigeration Technology

#### Consistent cooling capacity

Easily removable venting grid for quick and easy dust removal

#### 100 % cooling capacity

'Active Cooling Control' for full utilization of the cooling capacity available throughout the entire working temperature range, fast cool-down even at higher temperatures

### Technical Features

#### Clever pump system

Reliable and consistent pump capacity, electronically adjustable pump stages

#### Serial connection

RS232 interface for PC connection, e.g. for data communication and recording of measured values

#### Easy program control

Integrated programmer for the execution of time and temperature dependent profiles, 1 temperature profile with 10 steps max., with real time clock

#### Connection of additional equipment

Stakei connections for solenoid valve, HSP booster pump and HST booster heater

### Warning & Safety Functions

#### Early warning system for low liquid level

Maximum safety for applications, optical and audible alarm, allows user to refill bath fluid before the unit shuts down

#### Early warning system for high/low temperature

Maximum safety for applications, optical and audible alarm convertible to automated cut-off function

#### Enhanced protective function

Maximum safety, adjustable high temperature cut-off or dry-running protection, additional display of setpoints permits easy and precise adjustments

#### For flammable bath fluids

Class III (FL) according to DIN 12876-1

## Recirculating Coolers / Chillers

AWC100 ..... 6

F Series ..... 7

FC Series ..... 14-17

SemiChill Series ..... 18-21

Accessories ..... 22-29

Advantages at a Glance ..... 30-37

Technical Specifications ..... 38-41

# F/AWC Series

## F Series

-10 °C ... +40 °C

3 models with 250, 500, and 1000 W cooling capacity

The recirculating coolers of the F Series have very low procurement costs and convince with robust technology for continuous operation:

- Up to 1000 W of cooling capacity
- Compact design
- Easy access filling
- Level indicator
- May be used with water, water-glycol, JULABO Thermal G

### AWC100

+20 °C ... +40 °C

Air-to-water recirculating cooler

Ideal for simple cooling tasks:  
The AWC100 requires very little space and has a very low procurement cost.

# FL Series

## FL Series

-25 °C ... +40 °C

22 models with up to 20 kW of cooling capacity for laboratory and industrial applications

The recirculating coolers of the FL Series are suited for a wide range of cooling tasks:

- Up to 20 kW of cooling capacity
- Easy access filling from above
- Feed pressure indicator (from FL1201) and level indicator
- Large compensation volume
- Permissible return temperature up to +80 °C
- May be used with water, water-glycol, Thermal bath fluid

The removable venting grid makes it easy to clean the condenser. As a result, the instrument always delivers its full cooling capacity.

## FC Series

### FC Series

-25 °C ... +80 °C

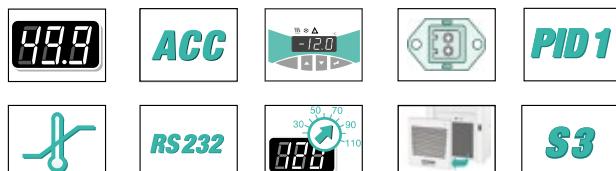

11 models for heating and cooling tasks with up to 2.5 kW of cooling capacity

FC models offer high temperature stability and are also equipped with integrated heating:

- Up to 2.5 kW of cooling capacity
- 1.2 kW of heating capacity
- Extended working temperatures up to +80 °C
- Adjustable feed/return temperature ratio
- Filling level indicator
- Two LED displays

#### Models FC1200T, FC1600T, FCW2500T

- External Pt100 sensor connection
- Analog connections for external programming and temperature recorder

on models FC1200T, FC1600T, FCW2500T

Sophisticated electronics with digital and analog connections for RS232, standby, alarm, external Pt100 sensor, temperature recorder, programming.

## SemiChill Series

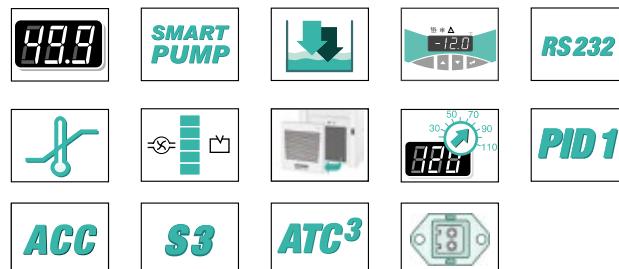

### SemiChill Series

-20 °C ... +130 °C

5 basic models for industrial applications up to 10 kW of cooling capacity, customizable

The SemiChill models are characterized by maximum reliability in continuous operation and under harsh environmental conditions. The modular concept permits custom configurations according to your requirements:

- Five basic models, individually configurable
- Up to 10 kW of cooling capacity
- Up to 12 kW of heating capacity
- Seal-free immersion pumps, maintenance-free and electronically adjustable
- Feed pressure indicator and level indicator
- Overload protection for pump motor and refrigeration unit

on models with professional electronics

Available with optional DI-filter or micro-filter housing.

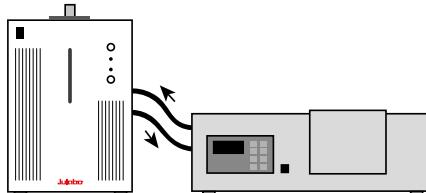

## Air-to-Water Recirculating Cooler AWC100

for working near ambient temperature

The AWC100 model requires very little space and has a very low procurement cost.

- Plug it in, switch it on, and you're ready to go
- Whisper quiet
- Saves energy (compressor-free design)
- Water loop cooled by fan air
- Uniform pump capacity
- Cooling performance adjustable in two steps
- Filling level indicator

Ambient temperature: +20 °C

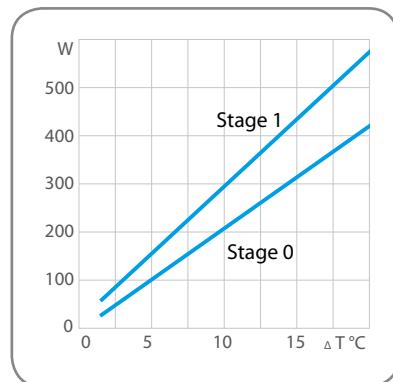

AWC100 is designed to cool water in closed loops. The unit permanently removes heat from water as it flows through the machine.

### Applications

Cooling of Peltier elements, particularly for automated analysis units and CCD cameras, polarimeters, refractometers, electrophoresis chambers, condensers for glass apparatus

### Example for determining cooling capacity

Ambient temperature: +20 °C

Return temperature: +30 °C

ΔT: +10 °C

Cooling capacity (stage 1): 300 W

## Compact Recirculating Coolers

for simple cooling tasks

JULABO F models require very little space and have very low procurement costs.

Recirculating coolers of the F Series are a great way to replace costly tap water and are ideal for basic cooling tasks.

- Environmentally-friendly operation with low energy consumption
- Compact design
- Splash-proof membrane keypad with LED temperature display
- Straightforward filling and draining
- Filling level indicator
- May be used with water, water-glycol, JULABO Thermal G

### For cooling of

- Rotary evaporators
- Kjeldahl instruments
- Measuring cells
- Automated analysis systems
- CCD cameras
- Polarimeters, refractometers
- Condensers for glass apparatus
- Calorimeters

## FL Recirculating Coolers

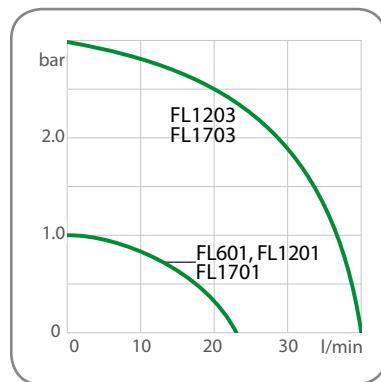

compact models with up to 1.7 kW of cooling capacity for installation below a lab bench

The compact FL models are suited for a wide variety of cooling tasks. Installation under a lab bench saves valuable space.  
2 variants: Air-cooled (FL) and water-cooled (FLW).

- Easy filling from above
- Feed pressure indicator (FL1201 and above) and level indicator (all models)
- Large compensation volume
- Circulating pumps designed for continuous operation
- Permissible return temperature up to +80 °C
- Low liquid level protection with visual and acoustic signals
- May be used with water, water-glycol, Thermal bath fluid
- Overload protection for pump motor and cooling machine

## FL Recirculating Coolers

powerful models with up to 4.3 kW of cooling capacity, tower version

The FL models shown here have higher cooling capacity, powerful circulating pumps, and internal bath volumes of up to 30 liters. 2 variants: Air-cooled (FL) and water-cooled (FLW).

- Powerful circulating pumps up to 60 l/min; 6 bar
- By-pass valve to adjust pump pressure
- Rollers make it easy to move the units
- Early warning function when condenser is dirty
- Overload protection for pump motor and cooling machine
- Stainless steel bath tank
- BlackBox function with error memory for remote diagnosis
- Stakei connection for connecting a solenoid valve

### Applications

Rotary evaporators, bio-reactors/fermenters, Soxhlet apparatuses, distillation systems, vacuum systems, gas chromatographs, spectrometers, semiconductor applications, metering and adhesive technology, diffusion pumps, mass spectrometers, electron microscopes

## FL Recirculating Coolers

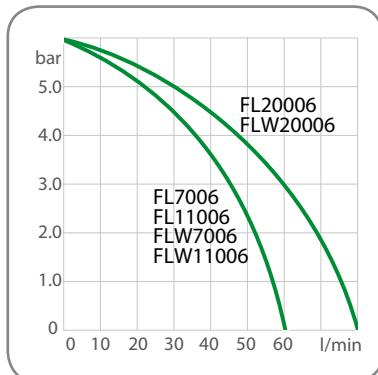

very powerful units, up to 20 kW of cooling capacity

The powerful FL models are suitable for a wide range of cooling tasks in industrial environments, such as removal of large process heat. 2 variants: Air-cooled (FL) and water-cooled (FLW).

- High cooling capacity of up to 20 kW
- Powerful circulating pumps
- Large power reserves with all applications
- Early warning function when condenser is dirty
- Low water consumption (on FLW models)
- Overload protection for pump motor and cooling machine
- Stainless steel bath tank
- BlackBox function with error memory for remote diagnosis
- Stakei connection for connecting a solenoid valve or a booster pump

Included in delivery: 2 Barbed fittings for tubing 1" ID  
(pump connections G 1¼" male)

**Pump capacity**  
Bath fluid: water

**Rollers add flexibility**

**Drain tap located behind removable venting grid**

**Pump pressure indicator for models from FL1201**

**Pump pressure adjustable for models from 3 bar**

### FC Recirculating Coolers

for heating and cooling tasks

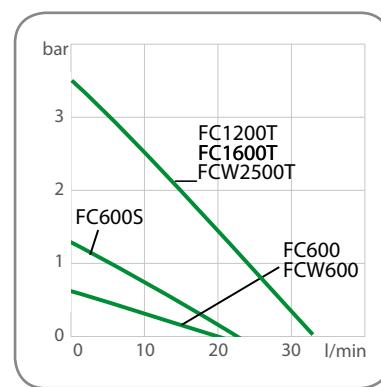

FC models offer high temperature stability and feature integrated heating in addition.

2 variants: Air-cooled (FC) and water-cooled (FCW).

- Extended working temperatures up to +80 °C
- Two LED displays
- Adjustable feed/return temperature ratio
- Filling level indicator

#### Pump capacity

Bath fluid: water

### What cooling capacity do you need for your application?

The JULABO temperature control specialists can already calculate an ideal cooling capacity for you based on little data. JULABO merely needs three values, which you can determine easily for your application in most cases:

| 1  
Temperature of the cooling water prior to entering the application

| 2  
Temperature of the cooling water after exiting the application

| 3  
Cooling water flow rate in liters per minute

Send these three values to [info.de@julabo.com](mailto:info.de@julabo.com). You will promptly receive a recommendation regarding the most suitable JULABO recirculating cooler.

## SemiChill Recirculating Coolers

for highest requirements in industrial environments

The SemiChill models are characterized by maximum reliability in continuous operation and under harsh environmental conditions. All parts in contact with the bath fluid are made of stainless steel or high grade plastic. The modular design permits custom configurations according to your requirements.

- Five basic models, individually configurable
- High cooling capacity and strong circulating pumps
- Optional with integrated heater with a heating capacity of up to 12 kW
- Seal-free immersion pumps, maintenance-free and electronically adjustable
- Pressure and filling level indicator
- Sealed filling port (70 mm Ø)
- Overload protection for pump motor and cooling machine
- Pump connections: NPT ¾" male

### Models with type designation

"a" = air cooling

"w" = water cooling

### Applications

Semiconductor industry (etching processes, stainless steel chucks, PVD, sputtering, wet benches), packaging industry, plastics industry, metering and adhesive technology, jacketed reaction vessels, kilo labs, pilot plants

### JULABO Thermal Bath Fluids

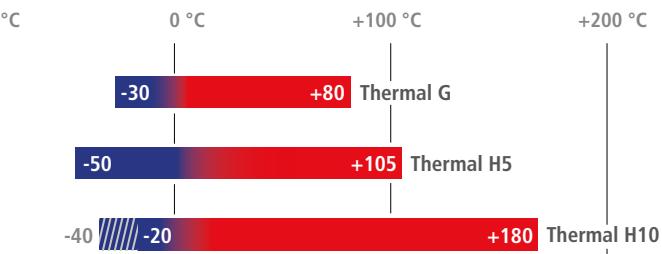

JULABO Thermal bath fluids have been carefully chosen after long-term testing. They are ideally suited for all of your temperature control applications guaranteeing safe and reliable operation.

Choosing the proper bath fluid is critical for the results in temperature control. The viscosity, oxidation and heat transfer characteristics of the Thermal fluids are specifically matched with each JULABO temperature control instrument.

#### Advantages

- Wide temperature ranges
- Low viscosity
- High stability
- Good heat conductivity
- Minimum odor
- Low corrosion tendency
- Low toxicity
- Long shelf life

#### Working temperature ranges

Working temperature range

Extended temperature range Thermal H10

#### Makes routine laboratory work easier.

JULABO Thermal bath fluids are delivered in containers with a handy drain tap.

### JULABO Thermal bath fluids based on silicon ...

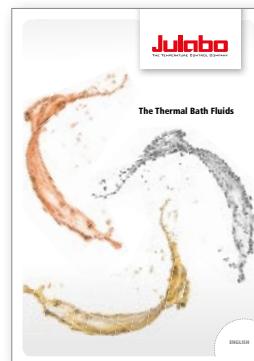

... are chemically inert substances which do not affect metals like iron, copper, zinc, aluminum, chrome or nickel. Compared to other fluids, JULABO Thermal fluids have an extraordinarily high dielectric strength. When properly stored, the fluids will last for 12 months and longer as they are not susceptible to climatic influences.

### JULABO Thermal bath fluids based on water-glycol ...

... (monoethyleneglycol with anti-corrosion additives) have excellent thermal characteristics and a low viscosity. In addition, they provide anti-freeze protection, i.e. they can be applied at temperatures below the freezing point of water.

### Booster Pump

The new JULABO magnetically coupled Booster Pump is the ideal solution to increase the pressure or flow rate in your application. The Booster Pump is specifically designed to be easily connected between various JULABO instruments and your application.

The Booster Pump can add 2.1 bar to your fluid pressure. The stainless steel design of the pump provides excellent resistivity against chemical effects. The pump design guarantees 100 % leakage free operation over an extraordinary temperature range of -90 °C ... +250 °C.

The Booster Pump is suitable for FC and SemiChill recirculating coolers<sup>\*3)</sup>

Pump connector cable for connection of the SBC converter box is included in the delivery.

(Measured in a fluid with a density of 1 kg/dm<sup>3</sup>)

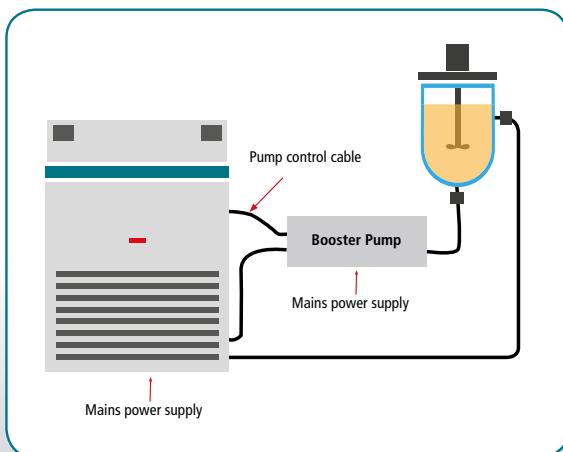

### Booster Pump (Magnetically Coupled)

Order No.	8 810 020	
Model	Booster Pump	
Working temperature range °C	-90	... 250
Pump type	Centrifugal pump	
Material Pump / housing	Stainless steel	
Pump capacity l/min	80	
Flow rate / Pressure bar	2.1 <sup>*1)</sup>	
Pump pressure adjustment	Manual	
Pump pressure display	2 manometers, for input and output pressure	
Suitable fluids	Water-glycol, silicon oil, Fluorinert®	
Viscosity max. cSt.	50	
Fluid connectors	M30x1.5 male <sup>*2)</sup>	
Mains power supply	208 – 230V	±10 % / 50-60 Hz 1~
Power consumption	1.85 A (208 V) / 2 A (230 V)	
Heat input W	230 at full motor speed	
Control input	3-pin connector for SBC converter box	
Weight kg	13.2	
Dimensions cm	W × L × H 28 × 42.5 × 24	

\*<sup>1)</sup> In addition to the pump pressure of the suitable JULABO instrument.

\*<sup>2)</sup> Adapters may be required.

\*<sup>3)</sup> The JULABO SBC converter box (Order No. 8 980 024) is required.

## Plate Heat Exchanger

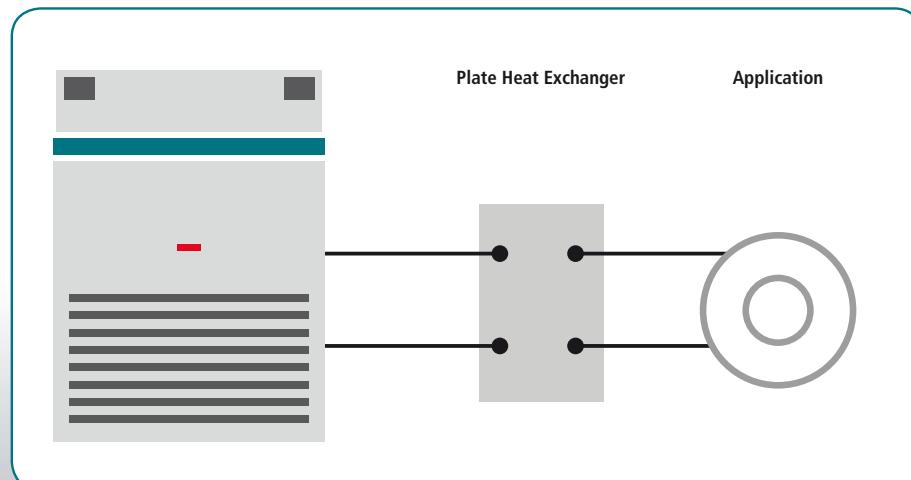

Plate heat exchangers from JULABO are the ideal solution for applications, in which the bath fluid cannot be used directly in the temperature control instrument.

Depending on the application, this may be the case for example due to viscosity, pressure or material compatibility. In such situations, a plate heat exchanger ensures system separation between the temperature control instrument circuit and the application circuit, thus enabling the use of JULABO devices.

The heat exchangers are compact, professionally insulated and, thanks to our decades of experience, always optimally tailored to customer-specific requirements. This includes topics such as dimensioning, connections, performance characteristics or desired temperature control medium.

### Application examples

- Temperature control of osmosis water in the temperature range of +4 °C to +84 °C.
- Cool-down and condensation of gases/vapors
- Cool-down of gear oil to temperatures down to -40 °C, following by maintenance of the required temperature after self-heating

# RECIRCULATING COOLERS

## Environmentally-friendly and Economic

JULABO recirculating coolers can handle virtually any cooling requirements in laboratories or industrial environments. Their efficiency makes them an environmentally-friendly and economical alternative to cooling with tap water. Compact models from JULABO are ideal for placement on or underneath a lab bench. JULABO offers several powerful models with up to 20 kW of cooling capacity for applications in industrial environments.

### Exclusive to JULABO instruments

JULABO recirculating coolers have no vents on the side panels. This means that you can save space by placing several instruments directly next to each other.

- Environmentally-friendly operation with low energy consumption
- Ergonomic design and easy operation
- Working temperature ranges from -25 °C to +130 °C
- Cooling capacity up to 20 kW
- Splash-proof keypad
- Large and bright LED display

- Alarm output (potential free contact) and RS232 interface on virtually all models
- Level indicator
- More powerful models with feed pressure indicator
- Circulating pumps with flow rates up to 80 l/min and pressure up to 6 bar
- Easy access filling
- Drain tap easily accessible
- No side vents, instruments can be placed right next to each other
- Air- and water-cooled models available
- High quality: All parts in contact with the bath fluid are made of stainless steel or high grade plastic (except FC-T models)

## Cost savings (example calculation)

Cooling rotary evaporators is a common way to use recirculating coolers. For example, an average size 3-liter rotary evaporator requires approximately 175,000 liters of cooling water per year. This is almost as much as the yearly consumption of a four-person household! The calculation below is for cooling of two rotary evaporators:

### Water is valuable and costly

The example calculation indicates cost savings of more than €1200 per year! Therefore, a JULABO recirculating cooler will pay for itself just after two years and make a contribution to environmental protection. Increased solvent recovery provides additional saving. The health of the lab employees benefits as well from ambient air with significantly less solvent content.

#### Application parameters

Cooling water inlet:	+15 °C
Cooling water outlet:	+17 °C
Water flow rate:	3 liters per minute

#### Calculation of cooling capacity

$$\begin{aligned} P &= \Delta T * c * m/t \\ \Delta T &= 2 \text{ °C} \text{ (temperature difference)} \\ c &= 4.18 \text{ kJ/kg * K} \text{ (specific heat capacity of water)} \\ m/t &= 0.05 \text{ l/sec (water flow rate)} \end{aligned}$$

**The required cooling capacity is 418 W.**

#### Cooling water costs

3 liters per minute	= 180 liters per hour
Operating time/year	= 240 days x 8 hours
Consumption per year	= 346 m³
Costs per m³	= 4 € *
Costs per year	= 1384 €

# RECIRCULATING COOLERS

## Individual and Efficient

### Individual solutions for your application

JULABO is ready to help its customers by providing custom solutions for special requirements. JULABO recirculating coolers can be customized in the following ways:

#### Electric switch output

Some applications require an additional switch output in order to connect a solenoid valve or enable evaluation of a status signal, for example. In situations like these, JULABO can integrate the connection of your choice into the recirculating cooler. All we need to know is the signal level and the desired connector type.

#### Higher cooling capacity

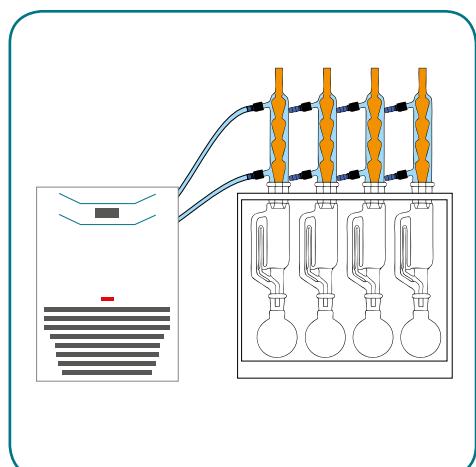

Does your application require greater cooling capacity at a specific operating point? If so, please speak with a JULABO expert. Define the required cooling capacity and corresponding operating point. Upon request, you will receive exactly the instrument that you need.

### Extraction

Quality control applications in laboratories for determination of fat content and extractable substances in food, animal feed, etc. used in the feed, animal nutrition, and dairy industries.

Extraction without consumption of cooling water, consistently reproducible condensation temperatures, without influence of ambient or seasonal temperature fluctuations.

Number of condensers	2	4	6	8	12	18	24

## Distillation

Common applications in QA laboratories for determination of alcohol, ethanol, or carbolic levels. Primarily used in the food, beverage, animal feed, cosmetics, and detergent industries as well as in clarification plants.

Distillation without use of tap water, with more effective and reproducible cooling and consistent analysis conditions.

Model	FL1201 F1000	FL2503	FL2503	FL4003

## Evaporation and condensation

Commonly used in laboratories for synthetic chemistry, organic chemistry, scale-ups, or in R&D labs for pharmaceuticals, chemicals, cosmetics, and nutritional chemistry.

Evaporation and concentration without consumption of water, elevated efficiency even at cooling temperatures as low as -10 °C. Independent of external conditions.

**Cooling and temperature control of 1 to 4 rotary evaporators at an evaporation temperature of +40 °C**

# User Benefits and Helpful Tips

## Adjustable pump capacity!

JULABO customers have several different options for controlling the pressure and flow rate in recirculating coolers:

| 1

The simplest option is a manually controlled, steplessly adjustable valve (e.g. accessory 8 970 454).

**Order at the same time!**  
Shut-off valve for recirculating coolers

| 2

Models FL1203 and above have an adjustment wheel on the rear of the unit. The wheel provides for stepless pressure and flow control and diversion through the internal bypass.

**Adjustment wheel at rear**

| 3

SemiChill models include adjustable pumps.

**Electronically controllable pumps**

## Autostart function after power failure!

All JULABO recirculating coolers have an autostart function. In order to comply with industrial standards, the factory setting is "Off".

A simple key combination makes it easy for a JULABO user to activate the autostart function. Then the recirculating cooler will restart automatically after a power interruption.

### USER TIP

## Pump protection

Other units on the market contain pumps (e.g. PD pumps) that may not run up against a closed pump connection without causing damage to the pump.

But pumps used in JULABO units are equipped with technology to ensure that they will not be damaged even if the external liquid loop is interrupted by a kink in the tube, for example.

**JULABO pumps work reliably even with back pressure**

## JULABO temperature control solutions – high-precision and speed

JULABO products include high-quality temperature control solutions to cover the temperature range from -95 °C to +400 °C.

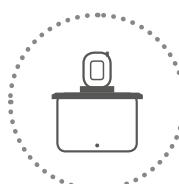

### Refrigerated Circulators

The JULABO Refrigerated Circulators are suitable for internal and external applications and can be used within the temperature range from -95 °C to +200 °C.

### Water Baths and Shaking Water Baths

Water Baths and Shaking Water Baths from JULABO can be used for a variety of applications within the temperature range from +18 °C to +99.9 °C.

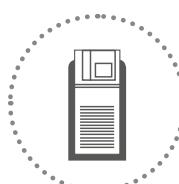

### Heating Circulators

Heating Circulators are available in various designs including Heating Immersion Circulators, Open Heating Bath Circulators, or Heating Circulators and cover the temperature range from +20 °C to +300 °C.

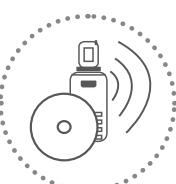

### Additional Products

In addition, the JULABO product portfolio offers instruments for special requirements such as Calibration Baths, Visco Baths, Beer Forcing Test Bath, Immersion / Flow-Through Coolers, Temperature Controllers and Refrigerators for Chemicals.

### Highly Dynamic Temperature Control Systems

The Highly Dynamic Temperature Control Systems from JULABO can be used for demanding temperature applications ranging from -92 °C to +400 °C. The PRESTO series offers unique high performance specifications to meet these requirements.

### Wireless Communication & Software Solutions

JULABO facilitates the automation of applications. The temperature control instruments can be comfortably controlled and monitored via PC.

### Recirculating Coolers

JULABO Recirculating Coolers are highly efficient and therefore offer an environmentally friendly and economic alternative to tap water cooling in the temperature range from -25 °C to +130 °C.

### Accessories

The extensive range of accessories for all our instruments allows flexible use of JULABO products in research and industry.

## Comprehensive service and on-site support

JULABO takes pride in offering customers expert advice for pairing the proper JULABO temperature control solution to their specific application. JULABO service and support options include installation and calibration, equipment qualification documentation and application training. These invaluable services ensure customer confidence in the operation and maintenance of any JULABO unit.

## Individual requirements – individual products

The wide range of JULABO offers a solution for almost any application. However, if a specific application needs more than a standard product can offer, the JULABO specialists will work out an individual solution with you.

**JULABO. Quality.**

Highest quality standards to ensure a long product life.

**Green technology.**

Deliberately engineered with environmentally friendly materials and technologies.

**Satisfied customers.**

11 subsidiaries and more than 100 partners worldwide guarantee fast and qualified JULABO support.

**100 % checked.**

100 % testing. 100 % quality. Every JULABO product is shipped to customers after a successful final inspection.

**Quick start.**

Individual JULABO consultation and comprehensive manuals at your disposal.

**Services 24/7.**

Around the clock availability. You can find suitable accessories, data sheets, manuals, case studies and more at [www.julabo.com](http://www.julabo.com).
